digit Power®
Dispenser

Moves With You

Designed for Use with
Aquasil® Ultra+
Smart Wetting® Impression Material
IT’S TIME TO ASK: IS YOUR DELIVERY SYSTEM WORKING FOR YOU?

Low viscosity impression delivery systems are built around the material—not the procedure or clinician—requiring extra steps to backfill a syringe or wrestle with a 50mL dispenser. Instead of suffering with wash delivery that doesn’t work for you, it’s time to find a better way.

76% of clinicians want a process and material to deliver more value to their procedure*

Feel the thrill of technology that moves with you.

SAY “HELLO” TO THE REVOLUTIONARY DIGIT POWER® DISPENSER.

With the touch of a button, it lets you focus on what matters most: a procedure done with precision. And when used with Aquasil® Ultra+ Smart Wetting® Impression Material it represents an impressive step forward in material delivery and procedural excellence.

92% of clinicians find precision placement to be “critically important” to their procedure*

digit Power® Dispenser

Designed for Use with Aquasil® Ultra+
Smart Wetting® Impression Material
Designed to work with you.

**IMPRESSION EERGONOMICS**

Dentists spend as many as 60,000 hours over the course of their career in improper body positions, negatively impacting their work and safety.¹

Current dispensing options are designed around the material itself and not the clinician or the procedure. These delivery options are often heavy and cause physical strain. Ergonomically awkward body positioning is often required to achieve stabilization and control to ensure adequate delivery results, despite risk of injury from body position.²

With a unique pen grip design and power delivery, the digit Power Dispenser allows you to assume a more ergonomic position and focus on precise delivery of the wash material.

- **Device weighs up to 42% less limiting placement errors and repetitive fine motor fatigue.**
- **Up to 84% less force required to dispense than 50mL dispenser.**
- **Get up to 63% closer to the tooth prep for more control.**
- **Up to 64% less range of motion due to inadvertent wrist movement.**

**GAME-CHANGING PRECISION**

The digit Power® Dispenser shortens the distance between the hand and the tooth prep to just three inches. With the closer proximity, there is considerably less risk of tip movement while dispensing, resulting in a more accurate flow of wash material around the tooth prep.

50mL dispensing guns require the dentist’s hand to work as much as eight inches away from the impression site and to apply approximately seven and a half pounds of pressure to pull the trigger. These and other factors reduce control and can compromise the procedure.

A radical new approach to dispensing.

The digit Power® Dispenser’s impressive set of design features complement the power of Aquasil® Ultra+ material to deliver results from the moment the material is dispensed. A slim, short mixing tip reduces distance to the impression site while reducing material waste. Single-use cartridges simplify the procedure from material loading to waste disposal. A built-in timer with work and set time notifications keeps you informed throughout the procedure. Two convenient speeds put control at your fingertips. This is simply the most advanced dispensing system on the market made for taking the most accurate impressions with utmost ease.
