Featured in our Showroom

Dentsply Sirona Axano® Treatment Centre

Features

- Smart design
- Excellent workflows
- Digital experience

Dentsply Sirona Sinius® Dental Chair

Features

- Motorised headrest
- Advanced patient communication
- Wireless foot control
- Integration of Endo and Implant

Dentsply Sirona Intego® Ambidextrous Dental Chair

Features

- Award-winning design
- Ambidextrous Option
- ErgoMotion
- Future-proof
- Modern patient communication
- Integrated Endodontics

We have the digital solution with Primescans[®], Primemill[®] & Speedfire[®] for demos

The PrimeScan enables high precision digital impression with a patented scanning technology and offers superior performance by capturing more data in higher resolution in less time.

- Full arch scan in less than one minute
- Real-time artifact removal
- Easy scanning of all dental materials including shiny materials and hard-to-reach areas like deep cavities
- Easy and intuitive scanning. allowing delegation to practice team

The CEREC Primemill uses different burs and diamonds depending on the type of material and processing option. The CEREC Primemill tool geometries have been optimized for different indications and materials providing for smooth surfaces and margins, detailed fissures and outstanding restoration fits.

The tool types are easily identified by their coloured caps located at their base. Each tool's RFID chip is used in combination with the CEREC Primemill's integrated RFID reader and touch interface to provide the user with easy step-by-step workflows and tool lifetime information.

CEREC SpeedFire is the smallest and fastest sintering furnace on the market and can typically sinter a crown in approximately 14 minutes. The advantages of full-contour zirconia can thus also be used for chairside treatment.

CEREC SpeedFire can process a great variety of different materials from a choice of validated partners.

Dentsply Sirona extraoral X-ray devices

- **Axeos®** - 2D/3D specialist system with a large volume and high image quality
- **Orthophos S®** - 2D/3D X-ray device, with automatic patient positioning together with the patented occlusal bite block enables an easy and timesaving patient positioning
- **Orthophos E®** - 2D X-ray

Teach patient positioning & workflow process

- Laptops with pre-loaded DICOM images in our Sidexis® and Sicut software

Dentsply Sirona Primeprint[®] | Dental 3D Printing System

3D printing is now here and ready for demonstrating how clean cut the digital process is, without the worry of handling harsh chemicals

Primeprint is a highly automated, end-to-end, medical grade 3D printing system for dentists and dental technicians who want to expand their treatment or service offerings. This smart hardware and software solution is optimized for dental applications and can run the entire printing process, including post-processing.

Demonstrate the ease of 3D printing with this user friendly, self contained printer. With in/lab workstation for designing your model.

Lab workflow

- InLab Profire® - Furnace
- InEos X5® – Scanner
- InLab MC X5® – Milling unit

Demonstrations from scanning, milling to firing

Book the Weybridge Academy

The Dental Academy is now open for bookings, and we are already filling up fast. With limited availability, we strongly encourage you to secure your spot before it's too late.

Book now to avoid disappointment.
