

## Atrium Health Appreciates Donation

Atrium Health, headquartered in Charlotte, North Carolina, sent a huge 'Thank You' to Dentsply Sirona in return for the donation of more than 12,700 masks. The face masks were part of Dentsply Sirona's donation initiative to help prevent healthcare workers from COVID-19 infections and support healthcare institutions' ability to run their businesses without interruption.

After the coronavirus outbreak started stretching medical resources in the region, Dentsply Sirona got in touch with Atrium Health's Charlotte, NC location about making a donation and went to work shipping them the masks. Atrium Health, which is an integrated network of not-for-profit healthcare systems with over 70,000 teammates at nearly 40 hospitals and 900 care locations in the southeastern United States, was one of the institutions in the US that received thousands of masks from DS. They sent one big thank you recently:

**“As we rise to the challenge of caring for our patients and communities during these unprecedented times, it's been truly inspiring to witness the people of our Queen City come together to show their appreciation for the men and women on the frontlines – our 'heroes in teal,' who are risking their health and safety to care for those impacted by the virus. So, on behalf of our more than 70,000 teammates at Atrium Health, I'd like to say “thank you” for your incredible donation. Please know your generosity is making a world of a difference, and we certainly would not be where we are today if it wasn't for your overwhelming support. Our mission to improve health, elevate hope and advance healing – FOR ALL is not only the way we care for our community but, in such a meaningful way, it's how our community cares for us, too.”**

– wrote Atrium Health CEO Eugene A. Woods.

Atrium Health is a nationally recognized leader in shaping health outcomes through innovative research, education and compassionate patient care. With locations throughout the Carolinas as well as Georgia, Atrium Health is a leading-edge innovator in virtual care and mobile medicine.
