Dentsply Sirona Imaging

Meeting users' needs: Dentsply Sirona releases Sidexis 4 V 4.3 and updates Orthophos SL

Dentsply Sirona has updated two imaging solutions: the imaging software Sidexis 4 and the software of the extraoral flagship, Orthophos SL. Dental practices and clinics now benefit from a complemented set of functions. The updated features fully meet their practical needs such as optimized performance and improved image quality.

Bensheim/Salzburg, September 26th, 2018. Providing imaging solutions that fulfill the practical requirements of dental practices and clinics – this ambitious demand inspired the release of Sidexis 4 V 4.3 as well as updates to the Orthophos SL software. Both updates have already been released. "The well-rounded features of the latest updates to Sidexis 4 and the Orthophos SL cover the whole scope of imaging functionalities that are essential for dentists and their teams", explains Jörg Haist, Director Product Management for Imaging Systems at Dentsply Sirona.

Enhanced performance saves time

Dentists save time thanks to the optimized performance of Sidexis 4 V 4.3 and the reduced image visualization time of 3D. Both, Sidexis 4 V 4.3 and the images load faster and thus operate quicker. Also, it is finally possible to delete patients' data and images. Unnecessary files – such as those beyond the duty to preserve records – can be eliminated, which optimizes memory space. Other improved performance features support collaborative working. For example, the multi-station display of Sidexis 4 V 4.3 now enables users to work on the same image at different work stations at the same time. In addition, the simplified installation of the Sidexis 4 V 4.3 Viewer makes it easier to share images with referals in other practices. Being able to delete patients' data and images is another feature that comes with the update.

Strong focus on image quality and functionality

Both new versions focus on high-quality image aspects. Besides the enhanced 3D image quality of Orthophos SL, Sidexis 4 V 4.3 now offers several refined image functions:

- 3D endo layout for easier endodontic analysis,
- STL import and
- New image filters – for example to invert the images' color.

Exposure rescue – always on the safe side

The latest Orthophos SL software release includes the appreciated exposure rescue within the image acquisition workflow. Should the connection between Orthophos SL and work station be interrupted during

About Dentsply Sirona:
Dentsply Sirona is the world's largest manufacturer of professional dental products and technologies, with over a century of innovation and service to the dental industry and patients worldwide. Dentsply Sirona develops, manufactures, and markets a comprehensive solutions offering including dental and oral health products as well as other consumable medical devices under a strong portfolio of world class brands. As The Dental Solutions Company™, Dentsply Sirona's products provide innovative, high-quality and effective solutions to advance patient care and deliver better, safer and faster dental care. Dentsply Sirona's global headquarters is located in York, Pennsylvania, and the international headquarters is based in Salzburg, Austria. The company's shares are listed in the United States on NASDAQ under the symbol XRAY. Visit www.dentsplysirona.com for more information about Dentsply Sirona and its products.

image transmission, the dental practice's team can easily recover image data.

Clinic integration and easy handling

Other features of the updates address the needs of dental clinics and technicians. The Sidexis 4 V 4.3 readiness for Sidicom QR is a particular new advantage for dental clinics as they can now integrate both systems. Moreover, with Orthophos SL, technicians will experience several simplifications such as a shorter calibration time reduced by up to 20 per cent.
