

GAC's In-Ovation® *mini*  
Self-Ligating Bracket

An Outstanding Bracket  
That Doesn't Stand Out

# High Achievement in Low-Profile Orthodontics

The In-Ovation mini draws upon the proven features that you have always loved about the rest of the In-Ovation line. The smaller footprint and low-profile aesthetics make In-Ovation *mini* a patient-friendly extension to the In-Ovation family of self-ligating brackets.

## Genuine In-Ovation Features

**True Straight Wire Design** - A true straight wire appliance is one in which all the brackets have been designed to guide the teeth into their ideal position with a preformed wire. In-Ovation *mini* is a true straight wire appliance that features a compound contour base, torque in the base, programmed in-out control and level slot alignment.

**Easy Open Clip** - With specially designed opening tool. Interactive Spring Clip - Presents the utmost in control throughout treatment.

**Low Profile True Twin Design** - Four tie-wings with undercuts and integrated body channel allows for anchoring of elastic chains, or use of color ties at the patient's request.

**Base Design** - An 80 gauge single mesh, with Standard Palmer Notation laser-etched into the mesh facilitates bracket management with a ready reference of the quadrant, tooth and prescription.

**Disto-Gingival Dimple** - A color code on the disto-gingival tie-wing provides immediate identification of the tooth for which the bracket was designed.

**Triple Chamfered Slot Walls** - Ease of engagement, reducing the chance of the archwire binding or crimping.

**Slot Blocker** - Patented Slot Blocker prevents the archwire from escaping the slot.

## Programmed for Versatility

In-Ovation® *mini* is proud to offer you the versatility of both interactive and passive design in a single unified system. It puts unprecedented treatment options in your hands. Passive cuspids and bicuspid are available in the posterior for lower friction sliding mechanics.
